Patents Worldwide....

By Phillip Taylor MBE

[[VIDEOID:mo34HJMUFZSDQTN]]

AN ANALYTICAL LOOK AT FUTURE TRENDS AND POSSIBILITIES

An appreciation by Phillip Taylor MBE and Elizabeth Taylor of Richmond Green Chambers

The book brings together the work of 16 learned contributors, all experts in the various manifestations of intellectual property law worldwide. As there are any number of countries where intellectual property law is more or less at a nascent stage, the publication of this book by Edward Elgar is timely.

The editor, Ryo Shinamami explains that he intends to analyse different perspectives on the patent system (which we assume is the patent system worldwide), which he regards as being at a turning point as it continues to evolve in various forms in various jurisdictions, including Japan, the US, Europe, India, Brazil

and China. Practitioners, economists and academics generally, who are interested particularly in the latter three economies will find this book useful.

It was the Institute of Intellectual Property in Japan which originally decided to publish this thought provoking work of research to commemorate its 20th anniversary in 2009, its foundation being inspired by the youthful ambition of Shimanami to create an organisation in Japan similar to the Max Planck Institute in Munich where he had once studied.

As the dream has been realized, it is startling to read Shimanami's comments that there seems to have been what he terms 'a loss of momentum in Japan's initiative to become an intellectual property power'. Surprising this, when you consider Japan's technological pre-eminence and its dependence on trade!

However, notwithstanding the fundamental problems inherent in the patent system internationally, he concedes that it has nonetheless established its global presence.

In line with the book's overall aims, the learned essays therein -- some very technical -- are presented under three main headings. Part I deals with the essence of -- and the functions of -- the patent system from both jurisprudential and economic perspectives, Part II looks to the future of the patent systems in, for example, Europe, the U.S. and Japan. In Part III the focus is on the future perspectives and challenges that will impact on the respective patent systems of India, China and Brazil.

In a rapidly changing world where business has gone global and where commercial boundaries are becoming increasingly blurred, the eventual evolution of a worldwide patent system seems like a practical possibility that will nonetheless take a long time to evolve.

In the meantime, this book, with its copious footnoting and detailed index, provides an excellent research tool for anyone professionally involved in the implementation and designing of patents and specifically of patent systems.
